Test AZ-305 Preparation & Reliable AZ-305 Exam Simulator

P.S. Free & New AZ-305 dumps are available on Google Drive shared by Itbraindumps: https://drive.google.com/open?id=11I0BaSAgUdv0LaNnUdjYdZ544nRRfD12

About Microsoft AZ-305 Exam, each candidate is very confused. Everyone has their own different ideas. But the same idea is that this is a very difficult exam. We are all aware of Microsoft AZ-305 exam is a difficult exam. But as long as we believe Itbraindumps, this will not be a problem. Itbraindumps's Microsoft AZ-305 exam training materials is an essential product for each candidate. It is tailor-made for the candidates who will participate in the exam. You will absolutely pass the exam. If you do not believe, then take a look into the website of Itbraindumps. You will be surprised, because its daily purchase rate is the highest. Do not miss it, and add to your shoppingcart quickly.

Microsoft AZ-305 is a certification exam that is designed to test the skills and knowledge of IT professionals regarding the design of Microsoft Azure infrastructure solutions. AZ-305 exam is intended for professionals who have expertise in designing and implementing solutions that run on Microsoft Azure. Designing Microsoft Azure Infrastructure Solutions certification is essential for those who want to pursue a career in cloud computing and want to enhance their skills in Microsoft Azure.

Reliable Microsoft AZ-305 Exam Simulator - Valid AZ-305 Test Cram

With AZ-305 study engine, you will get rid of the dilemma that you work hard but cannot improve. With our AZ-305 learning materials, you can spend less time but learn more knowledge than others. AZ-305 exam questions will help you reach the peak of your career. Just think of that after you get the Designing Microsoft Azure Infrastructure Solutions AZ-305 Certification, you will have a lot of opportunities of going to biger and better company and getting higher incomes!

The Microsoft AZ-305 exam measures the ability of candidates to design and implement Azure solutions that meet business requirements, optimize performance, and ensure the availability of services. It covers various Azure services, including compute, storage, networking, security, and identity. Candidates are also expected to have hands-on experience with Azure tools and services, such as Azure CLI, Azure PowerShell, Azure Portal, and Azure Resource Manager templates. Passing the Microsoft AZ-305 Certification Exam demonstrates that candidates have the knowledge and skills required to design and implement Azure

infrastructure solutions, which can help them advance their careers in the cloud computing industry.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q372-Q377):

NEW QUESTION # 372
You have the Azure resources shown in the following table.

Name	Type	Location
US-Central-Firewall-policy	Azure Firewall policy	Central US
US-East-Firewall-policy	Azure Firewall policy	East US
EU-Firewall-policy	Azure Firewall policy	West Europe
USEastfirewall	Azure Firewall	Central US
USWestfirewall	Azure Firewall	East US
EUFirewall	Azure Firewall	West Europe

Microsoft itbraindumps.com

You need to deploy a new Azure Firewall policy that will contain mandatory rules for all Azure Firewall deployments. The new policy will be configured as a parent policy for the existing policies.
What is the minimum number of additional Azure Firewall policies you should create?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
Firewall policies work across regions and subscriptions.
Place all your global configurations in the parent policy.
Note: Policies can be created in a hierarchy. You can create a parent/global policy that will contain configurations and rules that will apply to all/a number of firewall instances. Then you create a child policy that inherits from the parent; note that rules changes in the parent instantly appear in the child. The child is associated with a firewall and applies configurations/rules from the parent policy and the child policy instantly to the firewall.

NEW QUESTION # 373
You ate designing a SQL database solution. The solution will include 20 databases that will be 20 GB each and have varying usage patterns. You need to recommend a database platform to host the databases. The solution must meet the following requirements:
* The compute resources allocated to the databases must scale dynamically.
* The solution must meet an SLA of 99.99% uptime.
* The solution must have reserved capacity.
* Compute charges must be minimized.
What should you include in the recommendation?

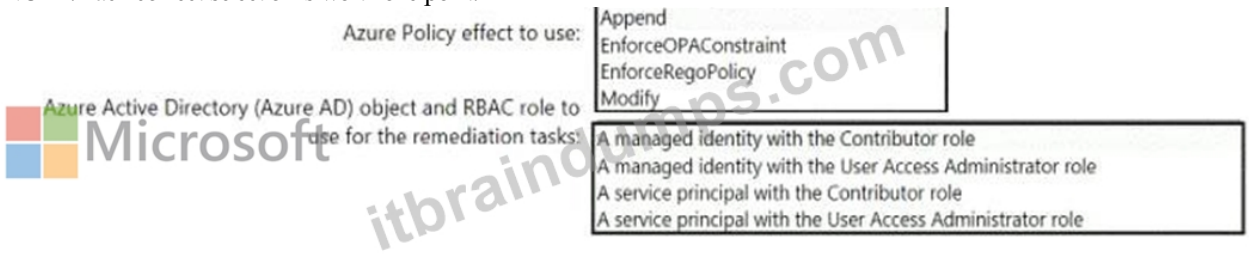

- A. 20 databases on a Microsoft SQL server that runs on an Azure virtual machine
- B. an elastic pool that contains 20 Azure SQL databases
- C. 20 instances of Azure SQL Database serverless
- D. 20 databases on a Microsoft SQL server that runs on an Azure virtual machine in an availability set

Answer: B

Explanation:
Explanation
Azure SQL Database elastic pools are a simple, cost-effective solution for managing and scaling multiple databases that have varying and unpredictable usage demands. The databases in an elastic pool are on a single server and share a set number of resources at a set price. Elastic pools in Azure SQL Database enable SaaS developers to optimize the price performance for a group of databases

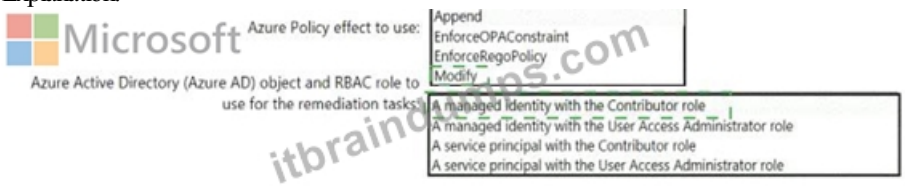

within a prescribed budget while delivering performance elasticity for each database.
Guaranteed 99.995 percent uptime for SQL Database

NEW QUESTION # 374
You need to design an Azure policy that will implement the following functionality:
* For new resources, assign tags and values that match the tags and values of the resource group to which the resources are deployed.
* For existing resources, identify whether the tags and values match the tags and values of the resource group that contains the resources.
* For any non-compliant resources, trigger auto-generated remediation tasks to create missing tags and values.
The solution must use the principle of least privilege.
What should you include in the design? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

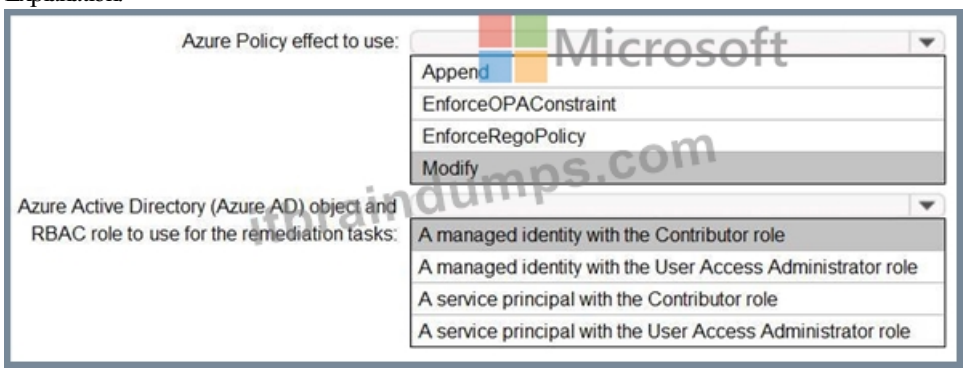

Answer:

Explanation:

Explanation:

Box 1: Modify
Modify is used to add, update, or remove properties or tags on a resource during creation or update. A common example is updating tags on resources such as costCenter. Existing non-compliant resources can be remediated with a remediation task. A single Modify rule can have any number of operations.
Box 2: A managed identity with the Contributor role
* Managed identity
How remediation security works: When Azure Policy runs the template in the deployIfNotExists policy definition, it does so using a managed identity. Azure Policy creates a managed identity for each assignment, but must have details about what roles to grant the managed identity.
* Contributor role
The Contributor role grants the required access to apply tags to any entity.

https://docs.microsoft.com/en-us/azure/governance/policy/concepts/effects#modify

NEW QUESTION # 375
Your organization has developed and deployed several Azure App Service Web and API applications. The applications use Azure Key Vault to store several authentication, storage account, and data encryption keys. Several departments have the following requests to support the applications:

Department	Request
Security	• Review membership of administrative roles and require to provide a justification for continued membership. • Get alerts about changes in administrator assignments. • See a history of administrator activation, including which changes administrators made to Azure resources.
Development	• Enable the applications to access Azure Key Vault and retrieve keys for use in code.
Quality Assurance	• Receive temporary administrator access to create and configure additional Web and API applications in the test environment.

itbraindumps.com Microsoft

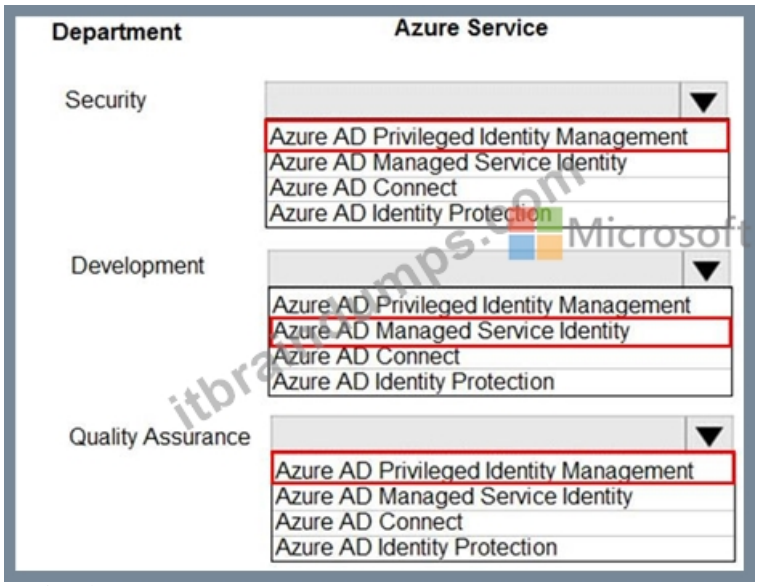

You need to recommend the appropriate Azure service for each department request.
What should you recommend? To answer, configure the appropriate options in the dialog box in the answer area.
NOTE: Each correct selection is worth one point.

NEW QUESTION # 376
You have an app named App1 that uses an Azure Blob Storage container named app1data.
App1 uploads a cumulative transaction log file named File1.txt to a block blob in app1data once every hour. File1.txt only stores transaction data from the current day.
You need to ensure that you can restore the last uploaded version of File1.txt from any day for up to 30 days after the file was overwritten. The solution must minimize storage space.
What should you include in the solution?

- A. blob snapshots
- B. container soft delete
- C. blob soft delete
- D. blob versioning

Answer: D

Explanation:
You can enable Blob storage versioning to automatically maintain previous versions of a blob when it is modified or deleted. When blob versioning is enabled, then you can restore an earlier version of a blob to recover your data if it is erroneously modified or deleted.
Note: To enable blob versioning for a storage account in the Azure portal:
1. Navigate to your storage account in the portal.
2. Under Data management, choose Data protection.
3. In the Tracking section, select Enable versioning for blobs, and then choose whether to keep all versions or delete them after a period of time.
